✓ Pay to dump
or burn?
Why not recycle
for free!
It's up to you

✓ Together we
determine how,
where and when
to collect your
foam waste

✓ We give your
foam waste
a purpose

THE SUSTAINABLE WAY TO GET RID OF YOUR WASTE

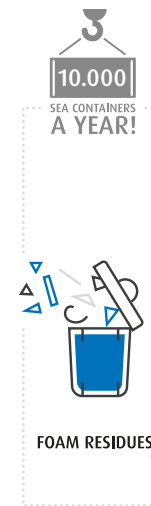

Schmitz has over 30 years experience in the collection, hauling and reworking of closed cell cross-linked polyethylene XPE foam residues.

Throughout the years we became the largest processor of XPE scrap in the world.

Dozens of large European and US foam producers and foam converters recognize the added value Schmitz has to offer.

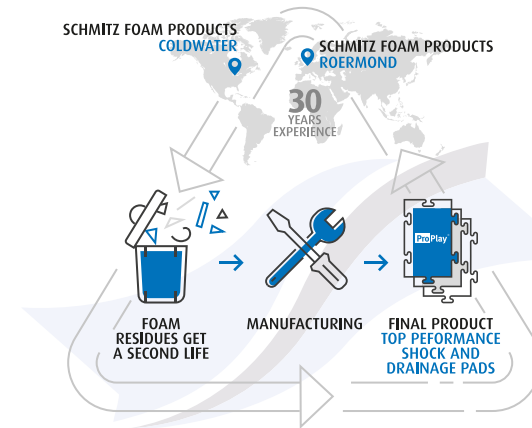

XPE foam is a voluminous product, making transport costly. Since 1990, we have developed several unique methods to collect XPE foam residues at costs as low as possible.

We offer unique concepts in collecting, hauling and reworking of XPE. Since the development of this process, much experience has been gained with this very specific material on an effective, efficient, but also clean and sustainable way.

All of the reworked scrap is being used in our high-end products which are applied worldwide.

HOW WE GIVE YOUR RESIDUES A SECOND LIFE

We cooperate with producers and converters of virgin foams by collecting their residues at their own factories and from their customers.

We support their Corporate Social Responsibility program by increasing sustainability in the whole chain. Together we ensure that your residues get a second life. No need to be eliminated at undesirable costs.
